

Solution Architecture

Date	04 July 2026
Team ID	
Project Name	HDI Predictor Using Machine Learning
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Provides a user-friendly interface for entering HDI-related inputs and displaying prediction results.	HTML5, CSS3
API Gateway / Application Layer	Receives user requests, validates input data, and coordinates prediction using the trained model.	Flask, Python
Core Logic Service	Processes input data and predicts the Human Development Index using the trained Linear Regression model.	Scikit-learn, Pickle
Data Layer	Stores the HDI dataset used for training and the serialized trained model used during prediction.	HDI.csv, HDI.pkl
