

Project Executable Files

Date	04 July 2026
Team ID	
Project Name	HDI Predictor Using Machine Learning
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file (.env.example)	No
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable)	N/A
8	Dockerfile / Containerization config	No
9	Test files and test results	Yes
10	Demo video / Walkthrough	No

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
HDI-Predictor-Using-Machine-Learning/
├── Dataset/
│   └── HDI.csv
├── Flask/
│   ├── app.py
│   ├── templates/
│   │   ├── index.html
│   │   └── result.html
│   ├── static/
│   │   ├── css/style.css
│   │   └── images/
│   └── model/
├── Model/
│   └── HDI.pkl
├── Notebook/
│   └── HDI_Prediction.ipynb
├── README.md
└── requirements.txt
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Deployed (Runs Locally)
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Local Flask Server
Repository Link	https://github.com/AP24110011041/HDI-Predictor-Using-Machine-Learning
Demo Video Link	Not Available

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Python 3.10

Flask

NumPy

Pandas

Scikit-learn

Matplotlib

Step 1: Clone the repository:

```
git clone https://github.com/AP24110011041/HDI-Predictor-Using-Machine-Learning.git
```

Step 2: Open the project folder.

Step 3: Install dependencies:

```
pip install -r requirements.txt
```

Step 4: Navigate to the Flask directory.

Step 5: Run:

```
python app.py
```

Step 6: Open your browser and visit:

```
http://127.0.0.1:5000
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Runs only on a local Flask server	Can be deployed later on Render, Railway, or Azure
2	No user authentication	Not required for the current project scope
3	Supports only the trained HDI dataset	Can be extended by retraining the model with updated datasets
